CLEANCARBON ASSURANCE

Independent CBAM Verification for Exporters to the EU

Verified embedded-emissions data your EU customers can rely on, so you don't have to fall back on default values.

cbamassure.com · nb@cbamassure.com

THE REGULATORY CONTEXT

CBAM has moved from reporting to paying

The EU's Carbon Border Adjustment Mechanism (Regulation (EU) 2023/956) puts a carbon price on the emissions embedded in imported goods. From 2026, costs depend directly on the emissions data you supply.

1

Oct 2023 – Dec 2025

Transitional period

Quarterly reporting only. No financial obligation, and verification not required.

2

1 Jan 2026

Definitive period begins

Authorised declarants import CBAM goods. 2026 embedded emissions count toward the first bill.

3

2027

Certificates & first declaration

CBAM certificate sales open. The annual declaration for 2026 imports is due by 30 Sep 2027.

4

2026 – 2034

Free allocation phase-out

EU ETS free allowances fall year by year, so the CBAM cost per tonne keeps rising.

WHY VERIFICATION MATTERS

Verified data vs. default values

Without verified data

- Your EU importer must use EU default values for your goods
- Default values carry mark-ups that grow each year
- A higher CBAM bill for your customer makes your product less competitive
- Your investment in cleaner production goes unrecognised

With CleanCarbon verification

- Actual embedded emissions, verified to CBAM rules, are accepted in the importer's declaration
- A lower and more predictable carbon cost for your EU buyers
- A commercial edge in tenders and supplier selection
- Credible evidence of your decarbonisation progress

SCOPE

CBAM goods we verify

Iron & Steel

Pig iron, DRI, crude steel, flat & long products, fasteners, articles of steel

Aluminium

Unwrought aluminium, bars, profiles, sheets, foil and articles

Cement

Clinker, Portland and other hydraulic cements, calcined clay

Fertilisers

Ammonia, nitric acid, urea, ammonium nitrate, mixed NPK fertilisers

Hydrogen

Hydrogen from all production routes

Electricity

Electricity imported into the EU

WHAT WE OFFER

Our services

Core service

CBAM Installation Emissions Verification

Independent verification of your installation's emissions report and the specific embedded emissions (direct and indirect) of each CBAM good, ending in a verification report you can share with EU declarants.

Verification readiness review

A limited pre-assessment of your monitoring plan, data flows and evidence before the formal verification, so there are no surprises on site.

GHG verification to ISO 14064-3

Organisation- and product-level GHG statements for customers, investors and voluntary disclosures.

EU customer support

Clear verification reports and guidance on sharing verified data with your EU importers through the CBAM registry.

HOW IT WORKS

Our verification process

01

Engagement

Impartiality and competence checks, scope confirmation, contract

02

Risk analysis

Review of installation, production processes, monitoring methodology and data risks

03

Verification plan

Sampling plan and data tests aimed at the highest-risk areas

04

Site visit

Physical inspection of the installation, meters, records and staff interviews

05

Data testing

Recalculation of embedded emissions, precursors, electricity and allocation to goods

06

Report & opinion

Findings raised and closed, independent technical review, verification report issued

What we will need from you

- Installation description, boundaries and production processes
- Monitoring methodology / monitoring plan used for CBAM
- Activity data: fuels, materials, production volumes by good
- Measurement records, meter calibration and lab analyses
- Purchased precursors and their embedded emissions (with evidence)
- Electricity consumption and emission factor sources
- Emissions report / CBAM communication template for the period
- Carbon price paid in the country of origin, if any

Tip: having data organised by installation and production process before we begin shortens the verification and reduces cost.

WHY CLEANCARBON ASSURANCE

A verification partner built for CBAM

CBAM specialists

CBAM is our core focus, not a side line to general certification.

Qualified lead verifiers

Led by ISO 14064 lead verifiers with hands-on GHG assurance experience in heavy industry.

Strict impartiality

We don't consult on the data we verify, so EU buyers can trust our opinion.

Close to exporters

India-based team: responsive site visits, local context, lower travel cost.

EU-aligned method

Work follows the EU CBAM implementing rules, supported by ISO 14064-3 and ISO 14065 principles.

Clear communication

Plain-language findings, predictable timelines and transparent fixed-fee proposals.

ACCREDITATION & NEXT STEPS

Plan your 2026 verification now

Accreditation status

CleanCarbon Assurance has applied for accreditation as a CBAM verifier, and the accreditation process is under way. We will confirm status and scope in writing in every proposal and before any verification opinion is issued.

1

Discovery call

We learn about your installation(s), CBAM goods and EU customers.

2

Scoping & proposal

A fixed-fee proposal with timeline and document request list.

3

Readiness review (optional)

Early gap check so data is ready before the verification window.

4

Verification

Planned around your production calendar, well before your customers' 30 Sep 2027 declaration deadline.
